

Austin Torres

908-875-8077 | austintorres578@outlook.com | github.com/austintorres578 | austinwebworks.dev
Union, New Jersey

SKILLS

Languages: HTML, CSS, JavaScript, TypeScript

Frameworks: React, Node.js, Express

CMS: WordPress

Tools: Git, Firebase, OpenAI API, Google Cloud Vision, Stripe API, RAWG API

WORK EXPERIENCE

Web Developer, Kraus Marketing – Morristown, NJ

Mar 2023 – Present

- Delivered 30+ WordPress builds across healthcare, finance, construction, and nonprofit clients, all still active today
- Repaired legacy PHP and migrated data via phpMyAdmin, ensuring zero downtime during a month-long host migration
- Served as the sole backup to the senior developer, resolving 5+ site outages and CORS issues same-day
- Built a custom WordPress plugin for an anchor client to accurately display confidential documents

Web Developer, Relevant Local Media – Wayne, NJ

Nov 2022 – Feb 2023

- Built a custom React form integrated with the Monday API, enabling clients to submit onboarding info directly into the team's project management workflow
- Designed and launched WordPress websites from scratch for 5 restaurant clients, with no dedicated designer, driving an increase in online orders and reservations

PROJECTS

Video Game Library Organizer/Database

jade-begonia-31d074.netlify.app

- Built an image-to-library import pipeline combining OCR and Open AI LLM parsing, automatically extracting and cleaning game titles from photos to eliminate manual entry
- Integrated Steam OAuth to sync a user's full owned-game library, converting titles into ready-to-import candidates in one click
- Aggregated game data, pricing, and storefront links across three external APIs (RAWG, IsThereAnyDeal, Steam) into a single unified game page
- Designed a custom Firestore-backed grouping system, letting users organize their library into their own custom collections beyond default categories

Soylent Ecommerce (Clone)

symphonious-frangipane-463737.netlify.app

- Migrated a production React e-commerce app from JavaScript to TypeScript, adding typed data models and type-safe event handling throughout
- Built a Stripe Checkout flow through a custom Express backend, handling secure session creation and payment redirection
- Implemented multi-tier purchase logic (subscription, one-time, prepaid) with a persistent, cross-page cart backed by localStorage

Community Food Bank of New Jersey

cfnj.org

- Built a pixel-perfect WordPress site from Figma designs for the state's largest anti-hunger organization, integrating a Food Finder API to help users locate nearby food banks
- Connected the site to Fundraise Up to support high-traffic donation processing
- Implemented SEO best practices and optimized responsiveness, improving mobile navigation and organic search visibility

CERTIFICATIONS
